SUMMARY

Data Scientist with **5+ years** building **quantitative models** and production data systems across commodity trading and financial-adjacent sectors, spanning **predictive modelling**, relational databases, and **NLP/LLM pipelines**. Communicates findings through **data analysis and visualization** to both technical and non-technical stakeholders.

PROFESSIONAL EXPERIENCE

Senior Data Scientist | [ACER Trading](#)

Jan 2026 - Present

- Sole owner of the company's **data and analytics function**, turning fragmented data across spreadsheets, messages, and PDFs into a structured foundation for daily trading and operational decisions.
- Analyzed historical cargo-allocation data to identify **value-maximizing allocation patterns**, translating statistical findings into trade-allocation decisions that contributed to **~\$7M in value over six months**.
- Found **demurrage** (port-waiting fees) was consuming **~5% of total trade volume**; built a **predictive alerting model** to flag at-risk vessels and drove the scheduling change that prevented the loss.

Data Scientist | [Snappfood](#)

Feb 2025 - Jan 2026

- Built an **LLM-based voice analytics pipeline** processing **~6,000 customer calls/month** (2-7 min each): transcription → LLM-based complaint extraction → structured outputs, cutting processing time **~80%**.
- Turned **unstructured voice feedback** into structured, analysis-ready complaint records feeding the company's central data platform.

Data Scientist | [Faratrah Steel](#)

Mar 2024 - Feb 2025

- Built **quantitative models** (XGBoost + ARIMA) for **predictive modelling** of weekly commodity-exchange prices, applying **feature engineering** across four years of exchange data enriched with FX rates.
- Cut prediction error by **18.5%** versus the legacy **~38% MAE** model, then deployed it to production with automated weekly refreshes guiding planning and procurement decisions.
- Built a monthly **credit-scoring pipeline** scoring **~300 customers** (**~\$1M** managed credit) with a **6-tier segmentation** framework replacing an ad-hoc, opaque process.

Junior Data Scientist | [Karyar](#)

Apr 2023 - Mar 2024

- Built a content **recommendation system** and chatbot for a VOD platform using **BERT** and Transformer architectures, with Python, TensorFlow, and PyTorch models integrated before launch.

Software Developer | [Nasir Driving Simulator](#)

Feb 2022 - Mar 2023

- Developed the **TCP/UDP socket-based** client-server networking layer enabling real-time data exchange between the supervisor and trainee stations of a driving simulator.

Teaching Assistant | [K.N. Toosi University of Technology](#)

Oct 2020 - Jan 2022

- Teaching assistant for programming courses in **Python**, **C++**, and **MATLAB**.

TECHNICAL SKILLS

Programming Languages: Python, SQL, R

Cloud & MLOps: Docker, CI/CD, Microsoft Azure, Git, GitHub, Linux, Jupyter

ML & Statistics: Scikit-learn, XGBoost, ARIMA, LightGBM, Random Forests, SVM, K-Means, Logistic/Linear Regression, Naive Bayes

Deep Learning: PyTorch, TensorFlow, Keras, Transformers, Attention, CNNs, RNNs, LSTMs

NLP & LLMs: RAG, Fine-tuning, LLM Integration & Orchestration, Transformers, Sentence Embeddings, BERT, Prompt Engineering

EDUCATION

M.S. IT Engineering - Tarbiat Modares University (GPA: A)

Oct 2023 - May 2026

Thesis: Detection of Cognitive Activities in EEG Signals Using Graph Neural Networks.

B.S. Mechanical Engineering - K.N. Toosi University of Technology (GPA: A)

Oct 2018 - Aug 2023

Thesis: Automated Femur Extraction from X-Ray Images Using Convolutional Neural Networks.
