SUMMARY

I am a 25-year-old AI Engineer and Data Scientist, born and raised in a small mountain city, who spends his spare time building side projects, tinkering with LLMs, and playing the setar and daf. Over 5+ years I have turned messy, fragmented data into production AI systems across commodity trading, food-tech, and industrial sectors - spanning LLM pipelines, predictive modelling, deep learning, and analytics. I own solutions end to end and bring strong stakeholder communication to both technical and non-technical audiences.

PROFESSIONAL EXPERIENCE

Senior Data & AI Engineer | [ACER Trading](#)

Jan 2026 - Present

- Sole owner of the company's data and analytics function - designed the PostgreSQL data model and built Python ETL pipelines feeding 4 Metabase dashboards used by a 20-person trading team.
- Analyzed historical cargo-allocation data to identify **value-maximizing allocation patterns**, translating statistical findings into decisions that contributed to **~\$7M in value over six months**.
- Found **demurrage** (port-waiting fees) was consuming **~5% of total trade volume**; built a **predictive alerting model** that flagged at-risk vessels and drove the scheduling change that prevented the loss.

AI Engineer | [Snappfood](#)

Feb 2025 - Jan 2026

- Built and deployed an LLM-based voice analytics pipeline processing ~6,000 customer calls/month, designing the downstream schema and ETL pipeline that turned unstructured voice feedback into structured, decision-ready complaint records, cutting processing time ~80%.
- Integrated **OpenAI, Gemini, and LLaMA** APIs with **cost-aware model selection** per stage, based on task performance and cost.
- Built a **geospatial coverage model** across **~50,000 vendors** in 120 cities to identify distribution gaps and guide vendor-acquisition strategy.

AI Engineer | [Faratrah Steel](#)

Mar 2024 - Feb 2025

- Built **quantitative models (XGBoost + ARIMA)** for **predictive modelling** of weekly commodity-exchange prices, applying **feature engineering** across four years of exchange data enriched with FX rates.
- Cut prediction error by **18.5%** versus the legacy ~38% MAE model and deployed it to production with automated weekly refreshes guiding planning and procurement.
- Built a monthly **credit-scoring pipeline** scoring **~300 customers** (~\$1M managed credit) with a **6-tier segmentation** framework replacing an ad-hoc, opaque process.

Junior Data Scientist | [Karyar College](#)

Apr 2023 - Mar 2024

- Built an **AI recommendation system** and chatbot for a VOD platform using **BERT** and Transformer models in Python, TensorFlow, and PyTorch, integrated before its public launch.

TECHNICAL SKILLS

Programming Languages: Python, SQL, R

Databases & Data Warehousing: PostgreSQL, MySQL, SQL Server, SSMS, SQLite, Azure Synapse Analytics

Data Engineering: ETL, Schema Design, Apache Spark, PySpark, Apache Airflow

Cloud & MLOps: Docker, CI/CD, Microsoft Azure, Git, GitHub, Linux, Jupyter

ML & Statistics: Scikit-learn, XGBoost, LightGBM, Random Forests, SVM, K-Means, Logistic/Linear Regression, Naive Bayes, ARIMA, PCA

Deep Learning: PyTorch, TensorFlow, Keras, CNNs, RNNs, LSTMs, Transformers, Attention, GNNs (GCN, GAT, RGCN)

AI, NLP & LLMs: HuggingFace, BERT, Sentence Embeddings, Fine-tuning, LLM Integration & Orchestration, RAG

Analytics & BI: Metabase, Power BI, Tableau, Dashboard Design, KPI Definition, A/B Testing, Stakeholder Reporting

Geospatial: GeoPandas, GeoJSON, KML, Shapely, Spatial Clustering, Spatial Joins

Web & APIs: FastAPI, Flask, REST APIs, Streamlit

EDUCATION

M.S. IT Engineering - Tarbiat Modares University (GPA: A)

Oct 2023 - Jun 2026

Thesis: Detection of Cognitive Activities in EEG Signals Using Graph Neural Networks.

B.S. Mechanical Engineering - K.N. Toosi University of Technology (GPA: A)

Oct 2018 - Aug 2023

Thesis: Automated Femur Extraction from X-Ray Images Using Convolutional Neural Networks.
